

VocaLites

The VocaLites are a specially designed system for audio reactive lighting. They debuted at the Escapade Music Festival as the Heineken Towers. Two 20 foot tall towers which served as both an interactive touchpoint and a VIP booth.

The VocaLites have also been deployed outside for over a month during Capilano Suspension Bridge's Canyon Lights festival. Both the lights and the microphones were outside for the entire month, showcasing how durable the system really is. For that show, we also added light rings around the microphone which illuminated when people spoke into them.

Both microphone options (plain or lit) are available to be customised. Other light sources can also be controlled by our audio system. See more on the next page

VocaLites

Customization Options

Microphones

Up to four microphones can be plugged into the VocaLites system. Any type of microphone can be used but we suggest using our customized microphones with light rings around the edge, which light up when spoken into. They're also rainproof.

Lighting

A variety of lighting that can be controlled by the VocaLites. It was originally designed to use 400 waterproof LED dome lights. These can be built into custom sculptures or integrated with in a landscape. Alternately, lanterns can be hung from above, creating a more intimate atmosphere.

Video Content & Projection Mapping

In addition to lights, the audio system controls video projectors. Custom branded video content can be created and then controlled by participants speaking into the microphones. There is a large library of existing content that can be used on its own or with custom content. A voice can cause a video to play or make a projection react.

What's Next?

This installation can be fully integrated with an event or brand. Do you have ideas for other things you'd like to see this do? Let us know! We're always happy to create custom options and push the envelope. Let's talk about how this can be used to wow fans and excite audiences. Contact us at rentals@hfour.ca for more information.
